

## VT-006<sup>™</sup> Autotracking Antenna

The VT-006 is a high gain portable autotracking antenna, it is self contained and is simple to setup and operate. The VT-006 has a dual polarization head that can receive signals from L thru C band with full data recovery and autotracking using a unique JDA Systems developed autotracking technique. It can point from directly overhead down to the horizon with unlimited rotation in azimuth and is the worlds only portable tracking antenna to achieve ISO11452-2 interference resistance from sources such as radar. The recovered combined data and clock signal outputs from the inbuilt bit synchronizers are provided from the integrated dual channel tracking receiver within the VT-006, along with the dual amplified RF feeds, so It is possible to operate the VT-006 stand alone without the need for an external data receiver if required.

The VuSoft software is used to provide the Antenna Control Unit (ACU) functions. This provides auto calibration, slaved "pointers", Program Tracking, Pre Tracking, Slaved Tracking and Full Autotracking systems together with optional data acquisition and data storage. The VT-006 is controlled via Ethernet that allows the antenna to be placed virtually anywhere that can be reached by a LAN making it possible to remote control or slave multiple antennas together even over exceptionally long distances.
